Vital Statistics of the Bengal Presidency.

ANNUAL RETURNS

OF THE

EUROPEAN ARMY OF THE BENGAL PRESIDENCY

FROM

1858 TO 1869,

OF THE

NATIVE ARMY SINCE ITS REORGANIZATION IN 1861,

AND OF THE

JAILS FOR EACH YEAR FROM 1859.

COMPILED AND SYSTEMATICALLY ARRANGED FROM THE ORIGINAL DOCUMENTS BY

JAMES L. BRYDEN, M.D., SURGEON, BENGAL ARMY,

STATISTICAL OFFICER ATTACHED TO THE SANITARY COMMISSIONER WITH THE GOVERNMENT OF INDIA.

Printed by order of Government.

CALCUTTA:

OFFICE OF SUPERINTENDENT OF GOVERNMENT PRINTING,

1871.

To be returned to :

UNIVERSITY OF LONDON LIBRARY DEPOSITORY,
SPRING RISE,
EGHAM,
SURREY.

From
THE LONDON SCHOOL OF HYGIENE
AND TROPICAL MEDICINE,
KEPPEL STREET,
LONDON, W.C.1.

With D. Bryden's Compliments.

NOTE.—With the exception of the Tables of the Appendix, the contents of this volume are the same which have appeared from year to year. The edition consists not of a reprint, but of copies remaining after the distribution of the Reports of the Sanitary Commissioner for each year. This circumstance explains the incompleteness in some of the minor arrangements of the work.

P R E F A C E.

The first portion of this volume was published in 1865, and appeared as an Appendix to the First Annual Report of the Sanitary Commissioner, which had reference specially to the year 1864.

This contains the detailed Statistics of the European Army for each year from 1858 to 1864. For the Native Army and Jails of the Presidency, the details for the year 1864 only are given; and for the earlier years of the period, the Statistics appear in a series of summaries, which show the general results in each year for the Native Army from the date of its reorganization in 1861 subsequent to the mutiny in 1857, and for the Jails from 1859 to 1863.

With some modifications, the standard adopted in 1864 has since been followed; and the Tables for the years from 1865 to 1869, as presented annually to Government by the Sanitary Commissioner, are placed here in sequence.

The Tables contained in the Appendix are designed to supplement the summaries for Jails and Native Troops of the earlier years, and to assimilate to the standard of the later years the entire series of Tables for the European Army for the ten years 1860-69.

INTRODUCTION.

Every observer of the phenomena of disease in India, has recognised the importance of distinguishing in a statistical record the facts as they occur in subordination to the meteorology of the different months of the year, and as exhibited within the widely-differing areas which form the field for the observation of the student of Indian disease. The tables which follow were, therefore, designed in the form in which they are now produced, with the object of showing the aspects of disease generally, and of the chief diseases which contribute to the sick-rates and death-rates in the types of the population of India represented in this volume, in relation to the place and season of their appearance.

Statistics of the period shown in relation to season and locality.

The figures of the ten-year period, 1860-69, fairly represent the results for the cantonment life of the British soldier in India. No disturbing elements due to war and consequent exposure have, during these years, affected the ratios proper to life in cantonments.

Afford for the British soldier a contrast of cantonment life and life in the field.

In contrast to the ratios shown in time of peace, the tables of 1858 exhibit the results of the exposure of an army which as a body was new to India. The events of 1857 swept off a large portion of the body of twenty thousand men upon which fell the responsibility of meeting and repelling the outburst of the mutiny year. The army of 1858 was massed in the last months of 1857, and throughout the hot season and rains of 1858—its first season in India—it was retained in the field. The statements for 1858 show the results of this exposure; and the statistics of 1859 prove that in that year also, although in a minor degree, the same influences were in operation.

It is right, therefore, that the statistics of 1858 and 1859 should stand separate from those of the succeeding ten years. And the ratios for the war province of 1858 may most properly be accepted as a standard of comparison for an army that may under similar circumstances be exposed in Upper India in its first year of Indian service.

During the six years from 1858 to 1863, the body here represented is virtually the same throughout, with the loss by death and invaliding and by the withdrawal of men whose period of service had expired, made good by the introduction of recruits. But since 1864, several regiments have annually been added, and in 1869 the new portion of the army constituted nearly one-half, 16,000 men having landed with their corps from England between 1864 and the spring of 1869.

For the years from 1858 to 1864, while the army was as a body of one age in respect to its Indian service, it was not considered necessary to introduce in the series of tables the results for individual regiments. But for the last five years, regimental tables have been appended, chiefly with the object of putting on record the statistical history of each regiment for the

Statistics of Regiments given for the last five years only.

whole period of its Indian service. The frequent reliefs which have of late years taken place between the regiments of the three presidencies, will, however, destroy the completeness of this history, unless means are used to ensure registration of the events of each year for all India on one uniform plan.

Statistics grouped for provinces which are natural.

I need not here recapitulate the reasons for which, while massing these statistics in groups, I have selected certain areas having a definite geography. My reasons for regarding the areas so selected as natural provinces will be found stated at length in my reports on the cholera of the period.

There are various minor modifications which it may be advantageous to introduce in arranging the statistics of 1870 and succeeding years; but after a careful study of the events of the past twelve years, I propose to adhere to the general arrangement adopted from 1864, and in use up to the close of 1869.

Corrections appended, bringing the series for all the years to a common geographical standard.

Having taken up as a whole and at one time the statistics of the six years from 1858 to 1863, and recognising the necessity for endeavouring to throw together the results for areas which should be as far as possible natural, I mapped out the presidency after a scheme which was in a great measure tentative and provisional. In supersession of the arrangement at this time adopted, in the tables from 1864 onwards, a different and more correct geographical distribution was substituted, affecting the area comprehending the Gangetic Provinces, Oude, the Doab and Rohileund. To amend what is a serious error in the statistics as originally printed, and to reconcile the disparity between the statistics of the earlier and later years, I have re-arranged the figures of the five years 1859-63 for the two provinces affected. When these ten tables, which appear in the Appendix, are substituted for those which they are intended to replace, the parallelism between the statistics of the European Army for each of the ten years 1860-69 will be found to be complete.

The tables of any year designed to illustrate a statistical report.

These tables were originally planned to illustrate a report of my own on the general history of the army in each year. But the Sanitary Commission having been formed soon after the completion of the first series, and the Government of India having resolved that the history of the armies and jails should in each year be prepared by the Sanitary Commissioner, the necessity for my throwing into words the facts contained in the figured statements was done away with. These tables have in each year since 1864 formed the basis of the statistical portion of the report of the Sanitary Commissioner.

Sketch of such a report, drawn from the contents of the different tables for 1869.

Special circumstances call for special explanations beyond what any mere collection of figures can show. But a glance at these tables will suggest that, taken individually and in sequence, they provide a general statistical history for each year for each of the types represented; and I shall briefly explain the idea upon which the series of tables has been constructed.

In the case of the European Army, taking the statistics of 1869 in illustration, the scheme of a statistical report, such as I have indicated, may be gathered from a sketch of the contents of the twenty-three tables which make up the series for the year.

Viewing the army of the presidency as a body, the first table shows what has been its strength, and how the strength may have varied in the different months, the number of men inefficient from sickness, the number admitted into hospital, and the number of men who have died in each month; and the causes of admissions and deaths are specified so far as readily to suggest, to those for whose use these tables are specially prepared, the extent of the influences, which in the year under review have determined the general aspect which the table presents. This table exhibits also the ratios of sickness and

mortality from all causes and from special diseases, and shows in what proportion to each hundred treated the chief diseases have proved fatal. Placing the first table for each of the past twelve years in contrast, the varying aspect of the history of the army in each year may be read without difficulty.

Sketch of the contents
of the tables of 1869,
—continued.

The whole of the tables which follow dissect the first table, leading the reader down through the different provinces to stations, and from stations to regiments and batteries; and as far as possible the details are supplied in relation to the season of their occurrence. It was not, however, considered expedient to print by years the monthly details for each station; but for each station of the presidency, I have arranged with strict accuracy the aggregate results for the past ten years in a table precisely similar to the leading table of each year, and these statements I propose to publish in reviewing the events of the ten years in relation to season and locality.

Tables II to VI show identically what is shown in the first table, for the troops cantoned in Bengal Proper, in the Gangetic Provinces and Oude, in Rohilcund and Meerut, in Agra and Central India and in the Punjab.

In Table VII the ratios for these different provinces are shown in contrast, in order that the relative prevalence of the chief causes of sickness and mortality in each may be distinguished.

Except in the case of cholera and smallpox it has not been considered essential to print the admissions for special diseases in each station of the presidency. According to the system of compilation followed, the admissions from any other of the chief diseases, such as fevers, heat apoplexy, or dysentery, might have been shown month by month for each station. It has been deemed sufficient to show the daily sick-rate of each month, and the annual ratios for the chief diseases which have prevailed at each station. Tables VIII and IX are taken up with these details; and Tables X and XI show the distribution by stations of the cholera and smallpox of each year.

Table XII is the mortality table, showing the distribution by stations of the total deaths of the presidency and the various provinces. The totals correspond with the totals which are shown distributed by months in the first table.

In Table XIII the loss of the army is summed up. The same total of deaths which appears in abstract in Tables I to XII is here shown in its details; and parallel with this is exhibited the Loss by Invaliding, the Causes of Invaliding, and the Ratios for the chief diseases on account of which men have been invalided.

Further details of the Invaliding of the year are given in Table XVI, where, for each regiment and station, the extent of invaliding and the causes are shown. But it must not be assumed that for any particular station the invaliding-rate accurately represents the ratio proper for the locality. Many causes contribute to render abortive the attempt to trace to a local origin the causes of invaliding; and little dependence can be placed on invaliding-rates which appear in connection with the statistics of any station, as significant of association with the locality. Some have considered that the deaths of invalids on the homeward voyage should properly be added to the loss by death of the army of India. This does not seem to be a matter of much consequence, provided the fact be not lost sight of, that a considerable percentage of invalids may be expected to die on the passage home.*

* The number of Deaths of Invalids from the Bengal Presidency on the voyage from India to England, for the nine years 1860-68, is stated in the Annual Army Blue Books to have been as follows:—1860, 42; 1861, 45; 1862, 72; 1863, 84; 1864, 82; 1865, 79; 1866, 108; 1867, 67; and 1868, 69. The death-rate for the total invalided, calculated on the invaliding of the nine years 1860-69, is 4·56 per cent.

Sketch of the contents
of the tables of 1869,
—continued.

Table XIV shows the alterations in the constitution of the regiments composing the army during the year. The facts are shown in summary only, since the details of the deaths and invaliding of each regiment, which are chiefly of importance to us, are given subsequently in Table XVI. Table XIV does not, as a rule, represent the strength of January of the leading table. Regiments which have been added to the army of the presidency during the year may have arrived in any month before April; and in this return regiments arriving show their strength as at the date of their landing in India. Occasionally, slight discrepancies will be noticed between the totals of death and invaliding of this table and those of other tables of the series. This is due to the fact, that men of regiments which may have been on the strength of the army of the presidency for a few weeks only at the beginning or end of the year, are not included in this statement.

Table XV is an index to the regimental table which follows (Table XVI). It shows how each regiment and battery was located at the middle of the year. And the date, the end of June or the first days of July, is chosen, because at this season all movements of troops have ceased, and the Convalescent Depôts, of which also the returns appear in Table XVI, are occupied by the men who have been sent to the hills for change.

In referring to the regimental tables for any year, it is essential to keep in view that admissions and deaths are not shown in these tables in strict relation to the locality of their occurrence. Annual regimental tables cannot be satisfactorily used when the statistics of a particular locality are being enquired after, and grave mistakes may be made in the attempt so to employ the figures contained in these statements. The annual regimental return is intended to include the admissions and deaths of the head-quarter's strength, of detachments, of the men sent to Convalescent Depôts, and even of men who may have spent the whole season at depôts in other presidencies. Men also are included who may have volunteered from regiments serving possibly in Madras or Bombay, from the date at which they are struck off the roll of their previous regiment, although for months afterwards they may not have left their original station, or may have died before the date appointed for leaving. Deaths in other presidencies do not appear in the tables of this volume, which is designed as a record for the Bengal Presidency only.

Table XVI, supplemented by the details of the gain and loss statement, provides the statistical return for regiments and batteries. The totals for any year will be found very nearly to approximate to those of Table I, which, however, are always in excess, owing to the circumstance, that returns for regiments and batteries for short fragmentary periods are excluded from Table XVI.

The details of the total of admissions shown in Table XVI appear in the summary which concludes the series of tables for the year.

At the end of Table XVI, the Annual Relief of the year is appended.

For 1869, the statistics of the women and children of European Regiments are shown in a series of seven Tables, XVII to XXIII. It has been found possible to arrange the statistics of women and children by months for the two last years of the period only. Up to the 1st January 1868, the returns furnished for women and children were not included in the weekly return, but were given on separate slips, which in most cases were not printed and were not of uniform size. Under any circumstances, a complete return, as arranged for 1869, could not have been compiled for the ten years. The arrangement for 1868 and 1869 will serve to indicate the extreme importance of these monthly statistics, and particularly of the tables which refer to the children of European Regiments. For future years no difficulty will arise in following out the system here adopted. Provision has also been made for

showing from 1870 onwards the mortality of the children in relation to age, and thus supplying a serious omission in the forms in use for the past ten years.

The first table is parallel with Table I for men. Taking the women and children of the army as a body, the sickness and mortality of each month is shown, as well as the ratios for the year, in relation to the chief diseases. In the second table (XIX and XX), the deaths of the first table are shown distributed among the different stations of the presidency in which they occurred, and the average strength and death-rate for each station is also given. The third table (XXI and XXII) is parallel with Table XI for men, which shows the distribution of the cholera of the year by months and stations. And in the last table of the series, the causes of admissions and deaths are exhibited in detail.

For future years, some modifications in the arrangement here followed will be adopted. In particular, the larger number of men now sent annually to the hills renders it necessary that a province of elevation, irrespective of the geographical situation of the hill stations occupied, should be shown separately. The characteristics of this province are special to it, and contrast with those of any of the provinces of the plains of India.

Modifications of arrangement for future years. Province of Elevation. Convalescent Depôts.

It may probably be considered expedient also to show in a separate statement the sickness and mortality of the Hill Convalescent Depôts. While it is right that the admissions and deaths of Murree and Dhurmsalla should be added in order to make the statistics of the Punjab more complete, it must not be overlooked, that when the Kussowlie Depôt also is included, the statistics of the sickly men of many regiments not serving in the Punjab are thrown in, to the disadvantage of the Punjab taken as a province. The ease of Landour and Nynce Tal is even more conspicuous. But a small proportion of the invalids is drawn from Rohileund and Meerut. Central India has no Convalescent Depôt, and, consequently, Kussowlie, Nynce Tal and Landour receive the invalids of this, the most unhealthy province of the presidency. Nor has Oude a Convalescent Station in the hills, so that this province also is dependent on the depôts further to the west. Darjeeling, which is geographically connected with the eastern province, draws a large number of its invalids from the stations of Lower Bengal.

Except in the case of Meerut and Rohileund, however, the ratios for provinces are not materially influenced by the fact that the strength of these depôts is a material which has specially suffered. The facilities for invaliding to England being greatly increased, the class of cases sent to the hills is not so bad as formerly, and in respect to admissions the effect of the hill climate is in some measure an offset against the fact that the occupants of hill depôts are a sickly population. But in making this remark the palpable fact must not be lost sight of, that these convalescents are really men suffering severely from the effects of climate. Upwards of 50 per cent. (53·55) of all men sent to these depôts in 1869 were invalided to England at the end of the season.

Reference to the table of contents will show how far the arrangement followed in placing in order the statistics of the European Army has been employed in the case of the Native Army. For the last five years, regimental statistics as well as the details for stations and provinces have been given to afford the opportunity of judging of the after-effects of residence in any special locality. The great fluctuation in the material of Native Regiments introduces a disturbing element of importance in the statistics of the Native soldier. Besides men struck off for medical reasons, there were discharged otherwise—in 1866, 2,319; in 1867, 2,868; in 1868, 3,080, and in 1869, 2,643 men. Notwithstanding the disparities of the different races which now enter into the composition of the Native Army, and the exceptional fact that to the health of the Native Army as constituted service in various parts of India, for

Native Troops in contrast to the European Army.

example in Lower and Eastern Bengal, is prejudicial, the statistics of the Regular Native Army afford a fair standard of contrast when placed beside the statistics of the European Army. A body of men of Hindostan nearly equal in strength and of the same age is represented; and the details of this body are distributed over the same geographical area in numbers not very disproportionate.

Significance of Jail statistics.

The jail population is essentially a floating body, and in dealing with the statistics of prisoners this must be kept clearly in view. While the statistics of jails are of great value to the student of epidemics and of the natural history of disease generally, the records of these ten years very plainly show that the statistics of prisoners are removed from those of such bodies as the armies of India by a very wide interval. The statistics of jails do not furnish a standard to which we would think of referring for comparison the results shown in the case of the European or Native soldier except in certain special instances. The statistics of prisoners in any year, and for any province, are to be studied in comparison or contrast with the statistics of a body of equal strength passing through the same jails in other years, or with a standard formed from the average for a series of years.

Statistics drawn immediately from monthly and weekly returns.

The statistics of jails have been taken from the monthly returns, and have been checked from the annual returns of each year. But for the European and Native Armies the regimental weekly returns, written up on each Friday evening throughout the year, have been made the basis of the monthly tables of this volume.

One of the chief advantages in working from monthly and especially from weekly details, is, that the medical history of any body of men is brought up month by month or week by week before the recorder; and from experience, I have come to regard as the most valuable annual report that is supplied the fifty-three paragraphs of remarks on the prevalence of general and special diseases, the results of *post-mortem* examination in fatal cases, &c., written by the medical officer when the events are still fresh in his memory, which is appended to the return for each week. The value to the statistical officer of these remarks and of the nominal roll of deaths which is attached to each weekly and monthly return, cannot be over-estimated.

Stational ratios given for the period of occupation, and not as averages spread over twelve months.

Those who are unacquainted with Indian statistics might be inclined to conclude that in calculating the ratios for stations in instances where the occupation has been for a period less than a year, the average of the strength should have been reduced and the ratios calculated as for the year. In every case in which it has occurred that in the interval between the annual reliefs a station has remained unoccupied, it has been in the months from November to March, and the period has not exceeded one or at the most two months. Now we know that these months give an admission-rate which does not in the least correspond with the average of the year, and a death-rate which in the majority of cases will be *nil*. I have preferred, therefore, to state the simple fact, that a station was occupied for the ten or eleven months by a body of a certain strength, and that for this period the admission-rate and death-rate was so much, rather than to make the fallacious assertion, that had the station been occupied for a whole year the annual ratios would have been represented by the average formed from the results spread over the period of occupation.

These statistics have in no case been framed from abstracts.

In no case has any abstract been used in the compilation of these tables. In as far as the details have been shown in abstract, the reduction to the abstract form has been my own work, and the original details have been carefully studied. The arrangements made by the Government of India require that these statistics shall be the work of the statistical officer himself, and this volume is entirely my own.

My object has been to put in print as little as possible, and to compress the statistics as far as is compatible with the idea of having a clear history running throughout the series of tables for any year. Special statistics of conditions will best be studied in the results for a period and not for each year; and, therefore, beyond the statements relating to the effects of age, to the influence of married life on the statistics of the British soldier, and a few others, which have appeared in the reports of the Sanitary Commissioner already published, the statistics of special conditions for individual years have not formed part of the annual scheme of statistical record.

Special statistics of conditions will appear in another volume.

Those best acquainted with statistics are best prepared to recognise how difficult it is in a general system to express pure facts by figures and ratios. To reduce to comparative purity and produce in a statistical form a series of facts requires a special study, beyond the mere tabulation of the figures found in returns. Complications constantly present themselves under which the statist is compelled to exercise his own judgment as to the place which figures of a certain value shall occupy. Those who forget that the true use of averages is their employment as indices, and strive after what the well-educated know to be unattainable, do not serve the true interests of statistical science. When we reflect that in vital statistics what is reduced to a system is the result of the daily observation of a body of many hundreds of individuals liable to err as to the interpretation of many of the facts observed, and apt to theorise in a wrong direction as to the conditions which have induced a certain chain of events, we cannot fail to see that it is less the duty of the statistical officer to aim at recording details unimportant towards the attainment of deductions of value to the State and to science, than to give expression in figures to truths which can serve a definite purpose, and to place these so that his standard of averages shall be approximately true and valuable for all time to come.

Purity in the composition of ratios the first aim of the statistical officer.

Nothing is more difficult than correctly to associate in groups that can be recognised as natural the different items which go to form classes in a system which proposes to fix standard ratios for groups of diseases. In India, where the exaggeration of the ratio for individual diseases is the characteristic of all vital statistics, the tendency will always be to fall back upon the direct etiological relations of disease, and to strive after purity by making each of the chief manifestations a special statistical study.

I am not unaware that all systems and all arrangements must fall very far short of perfection. Many deficiencies which the statistical officer must regret, almost necessarily remain after every care has been taken in working out the statistics of a series of years. His efforts in the direction of realising his conception of a standard are frequently bounded by a limit which he cannot pass because of the character of the material which is at his disposal, and he is obliged to rest content with the knowledge of the imperfections of his combinations.

The character of returns places a limit to the arrangements of the statistical officer.

Much must be done by others to supplement the imperfect work of the statistical officer. To write, for example, the medical history of special brain affections or of special heart diseases as developed in relation to climatic influences is beyond the province of the statistical observer, who seeks to record the general results in disease of the causes which are in operation. The history of special morbid conditions can be written only from the clinical study of individual cases as recorded at length by those who have watched them during the lifetime of the patients and after death. I have made use of the abstracts of *post-mortem* examinations appended to the weekly returns to render the death record more perfect, but the detailed statements of cases and deaths do not reach me. To a physician already acquainted with the general conditions which induce special diseases in India, these records offer a wide field for research.

Errors of the volume
as far as eliminated,
very few.

This volume of statistics has been completed under many difficulties. Commencing the work after five years of the period had elapsed, the labour of referring to original documents was very great, and the elimination of the errors of the earlier years was difficult and sometimes impossible. The more the contents of this volume are investigated, the more apparent will become the fact that there has been no carelessness in the preparation of the returns of any year; and if a few errors have appeared in the tables, the method of the occurrence can easily be explained. Having re-arranged nearly the whole of the figures in making the summaries for the ten-year period, I know that these blemishes are but few, and in the table of *errata* I have entered as many as I have noted.

Alterations and im-
provements deferred to
the commencement of a
new decade.

Even where alterations which might have improved the tables of the later years have suggested themselves, such as the reduction of all ratios to 1,000 as a standard, I have deferred to make the change in order to maintain the uniformity of the series of tables up to the end of the decade.

A knowledge of the local and general facts here placed on record cannot but serve to promote the study of the natural history of disease in this presidency; and when the history of the current decade comes to be statistically arranged, the aspects of disease may be of a more satisfactory character than those which it has fallen to me to show in this volume.

Errors of the volume as far as eliminated, very few.

This volume of statistics has been completed under many difficulties. Commencing the work after five years of the period had elapsed, the labour of referring to original documents was very great, and the elimination of the errors of the earlier years was difficult and sometimes impossible. The more the contents of this volume are investigated, the more apparent will become the fact that there has been no carelessness in the preparation of the returns of any year; and if a few errors have appeared in the tables, the method of the occurrence can easily be explained. Having re-arranged nearly the whole of the figures in making the summaries for the ten-year period, I know that these blemishes are but few, and in the table of *errata* I have entered as many as I have noted.

Alterations and improvements deferred to the commencement of a new decade.

Even where alterations which might have improved the tables of the later years have suggested themselves, such as the reduction of all ratios to 1,000 as a standard, I have deferred to make the change in order to maintain the uniformity of the series of tables up to the end of the decade.

A knowledge of the local and general facts here placed on record cannot but serve to promote the study of the natural history of disease in this presidency; and when the history of the current decade comes to be statistically arranged, the aspects of disease may be of a more satisfactory character than those which it has fallen to me to show in this volume.

PREFACE	iii
INTRODUCTION	v to xi*

(The Tables for the years from 1858 to 1864 are paged at the foot, consecutively from 1 to 158, for the years from 1865 to 1869, each Table of the Series is numbered, and in the Appendix the Tables are paged at the top in Roman type.)

EUROPEAN ARMY IN 1858.

1858.—European Troops, Bengal Presidency.		Sickness and Mortality of the Army in				
		each month	1
”	”	General Military Hospitals at Calcutta	2
”	”	Bengal Proper	3
”	”	Gangetic Provinces and Oude	4
”	”	Doab, Rohilcund, Agra and Central India	5
”	”	Punjab	6
”	”	Ratios of Sickness and Mortality in each Province—a Comparative Statement				7
”	”	Table showing the distribution of Smallpox in each month				8
”	”	Table showing the distribution of Cholera in each month				9
”	”	Detail of the Deaths of the Army, and the extent and causes of Invaliding				10

SUMMARIES 1859 TO 1863, PAGES 14 TO 33.

European Troops. —Table showing the ratios of Sickness, Mortality and Invaliding for				
		the Army of the Bengal Presidency as a body, in each of the five		
		years previous to 31st March 1857—(1852-53 to 1856-57)	...	14
(In these years many Regiments on the Strength of the Army of the Bengal Presidency served in				Burmah
		and Pegu.)		
European Troops. —Comparative Table showing the same ratios for the Army of the Presi-				
		dency in the five years following 1858 (1859 to 1863)	...	15
	*		*	*
(Tables 16 to 19 being Summaries for a broken period may be regarded as cancelled.)				
1860-63	„	Women of European Regiments. Details of the Admissions and		
		Deaths of Women for the four years 1860-63, and the ratios of		
		Admissions and Deaths on the average of these four years	...	20
„	„	Children of European Regiments. Details of the Admissions and		
		Deaths of Children for the four years 1860-63, and the ratios of		
		Admissions and Deaths on the average of these four years	...	21
Native Troops. —Comparative Statement showing the ratios of Sickness and Mortality in				
		each Province, for 1861	...	22
„		Ratios of Sickness and Mortality for 1862	...	23
„		Ditto ditto for 1863	...	24
Jail Population. —Comparative Statement showing the ratios of Sickness and Mortality				
		in each Province, for 1859	...	25
„		Ratios of Sickness and Mortality for 1860	...	26
„		Ditto ditto for 1861	...	27

	<i>Pages.</i>
Jail Population.—Ratios of Sickness and Mortality for 1862	28
„ „ Ditto ditto for 1863	29
(The details of the Admissions and Deaths upon which the ratios of these five Tables are founded, appear in the Appendix, pages xviii to xxvii.)	
European and Native Armies, 1860-63.—Detail of the Admissions and Deaths of the European Army for the four years 1860-63, and of the Native Army for the three years 1861-63	30
Jail Population, 1859-63.—Detail of the Causes of Admissions and Deaths in the Jails of the Presidency in each of the five years	32
(The distribution of these Admissions and Deaths by Provinces is shown in Appendix No. III, Pages 18 to 27.)	

EUROPEAN ARMY, 1859 TO 1863, PAGES 37 TO 113.

1859.—European Troops.—Sickness and Mortality in each month of the Army as a body	37
„ „ Sickness and Mortality in each month among the Troops serving in Bengal Proper	38
„ „ Sickness and Mortality in each month among the Troops serving in the Gangetic Provinces and Oude	39
„ „ Sickness and Mortality in each month among the Troops serving in Rohileund and Meerut	40
(Tables on pages ii and iii of Appendix take the place of the two preceding Tables, which are cancelled.)	
1859.—European Troops.—Sickness and Mortality in each month among the Troops serving in the Agra District and in Central India	41
„ „ Sickness and Mortality in each month among the Troops serving in the Punjab	42
„ „ Comparative Statement showing the ratios for the several Provinces	43
(As much of this Table as relates to the two Provinces above referred to is cancelled, and the substitute is found in the corresponding Tables of the Appendix.)	
1859.—European Troops.—General Statistics of Stations, and number daily sick in each Station in each month... ..	44
„ „ The ratio in which the chief diseases have contributed to the Annual Admission-rate of each Station	45
„ „ Distribution of Smallpox in 1859	46
„ „ Distribution of Cholera in 1859	47
„ „ Mortality Table for each Station of the Presidency	48
„ „ Details of Deaths, and the extent and causes of Invaliding	49

1860.—European Troops.—Details as above for 1859	53 to 65
(Tables on pages iv and v of Appendix take the place of Tables on pages 55 and 56, which are cancelled.)	

1861.—European Troops.—Details as above for 1859	69 to 81
(Tables on pages vi and vii of Appendix take the place of Tables on pages 71 and 72, which are cancelled.)	

1862.—European Troops.—Details as above for 1859	85 to 97
(Tables on pages viii and ix of Appendix take the place of Tables on pages 87 and 88, which are cancelled.)	

	<i>Pages.</i>
1863.—European Troops.—Details as above for 1859	101 to 113
(Tables on pages x and xi of Appendix take the place of Tables on pages 103 and 104, which are cancelled.)	
The note having reference to the Table of 1859 on page 43, page ii of Appendix, is applicable also to the corresponding Table for the four succeeding years on pages 59, 75, 91, and 107.	

1864—69.

EUROPEAN ARMY, NATIVE ARMY, AND JAIL POPULATION.

In addition to admissions of the Sick of Detachments recently disembarked, the re-admissions of sick and wounded men collected at Calcutta previous to embarkation for England, are included in this Table. The admissions from Chronic Disease, therefore, bear no relation except to the Army as a whole; and as the Sick were under observation for a limited period only, no special significance is to be attached to the Mortality rate appended to the respective diseases. The ratio of Mortality to Admissions from Acute Diseases, will, in several instances, be found allied to the rates prevailing in Lower Bengal generally. In the case of Heat Apoplexy, however, a discrepancy is very apparent; and it may be remarked here, as applicable to the Statistics of this Disease throughout the series of Tables, that from the fact of the various minor results of exposure to heat influence, as well as the graver, being returned under terms used indifferently for both, the importance of any manifestation of heat influence may be more correctly estimated by the absolute mortality, than by the mortality relative to the number treated.

The constant variation in the Strength of the Depôts in Lower Bengal has probably led to some irregularities in drawing up the Returns for certain months. The low sick-rate of June is due to a great increase in the Strength of the Dum-Dum Depôt, while no corresponding increase in the number daily under treatment in Hospital is shown in the Returns of the month.

* In his Annual Report for the year, the Medical Officer who returns these deaths, explains that all were cases of Dysentery, running to a fatal termination by complication with abscess of the liver. They should, therefore, properly have appeared under the head of Dysentery.

	1908	43.59		4.01	462	111.07

The Causes of Death indicated in this Table, are those specified in the Regimental Returns. There is reason to believe that in several instances return has been made of the original cause of admission into hospital, and not of the disease which was the immediate cause of death.

1859-63.

1. **Tables 14-33.**—Summaries for the whole or portions of the 5-year period : General Statistics of Sickness and Mortality among European Soldiers, Women, and Children ; the Native Army ; and the Jail Population of the Bengal Presidency.
 2. **Tables 37-113.**—Statements showing the Inefficiency and Loss of the European Army in each year of the period.
-

THE STATISTICS OF THE ARMY FOR EACH YEAR OF THE PERIOD ARE SHOWN IN A SERIES OF 13 TABLES.

- 1.—Shows the Sickness and Mortality of the European Army of the Presidency taken as a whole, and the prevalence of the chief diseases in each month of the year.
- 2.—Shows the Statistics of that portion of the Army which has been stationed in Bengal Proper during the year.
- 3.—The Statistics of the Behar Provinces, Benares, and Oude.
- 4.—The Statistics of the Cawnpore, Rohilcund, and Meerut Districts.
- 5.—The Statistics of the Agra District, and of Central India.
- 6.—The Statistics of the Punjab.
- 7.—A Comparative Statement of the Ratios of Sickness and Mortality in each of the above-mentioned Provinces.
- 8.—The Daily Sick-rate of each Station in each month, and the Admission-rate and Death-rate of the year.
- 9.—The Composition of the Admission-rate of each Station, and the extent to which it has been influenced by the prevalence of the chief diseases.
- 10 and 11.—The distribution of Small-pox and Cholera for the year, and the prevalence of these epidemics in each month of the year.
- 12.—The Composition of the Death-rate of each Station, and the detail of the chief diseases which have contributed to make up the sum of the total mortality.
- 13.—The Total Loss of the Army by Death and Invaliding, and the causes of the loss of the year, shown in detail.

1861

1. CONTENTS OF TABLES 14-33.

SUMMARIES showing the Ratios of Sickness and Mortality for EUROPEAN SOLDIERS, WOMEN, and CHILDREN; for NATIVE TROOPS; and for PRISONERS.

EUROPEAN TROOPS.

- Table 14.** 1852-53 to 1856-57.—Ratios of Sickness, Mortality, and Invaliding in the European Army.
- 15.** 1859 to 1863.—Ratios of Sickness, Mortality, and Invaliding in the European Army.
- 16.** „ Statement showing the relative prevalence of the chief causes of sickness and mortality in the various Provinces of the Presidency in each year.
- 17.** „ The Admission-rate, Sick-rate, and Death-rate for the chief Military Stations of the Presidency in each year of the period.
- 18.** „ The Admission-rate of the Army for each month, and the number per cent. of the Strength inefficient from sickness in each month of each year of the period; also, the ratios indicating, on the Average of the five years, the comparative prevalence of the chief diseases in relation to the meteorological conditions of the months.

EUROPEAN ARMY, WOMEN, AND CHILDREN—NATIVE ARMY—JAIL POPULATION.

- 19.**—Comparative Statement showing the Composition of the Admission-rate and Death-rate, according to the System of Statistical Nomenclature now in use, for European Soldiers, Women, and Children; for Native Troops; and for Prisoners; the ratios for Europeans taken on the average of the four years 1860-63; for Natives, on the average of the three years 1861-63.

WOMEN.

- 20.**—The causes of Admissions into Hospital, and of Deaths, among WOMEN belonging to European Regiments, for the four years 1860 to 1863; and the Annual Ratio of Sickness and Mortality from the principal Diseases on the average of the same period.

CHILDREN.

- 21.**—The causes of Admissions into Hospital, and of Deaths, among CHILDREN belonging to European Regiments, for the four years 1860 to 1863; and the Annual Ratio of Sickness and Mortality from the principal Diseases on the average of the same period.

NATIVE ARMY.

Ratios of Sickness and Mortality for the NATIVE TROOPS serving in the Bengal Presidency, and in each of its Provinces, for the three years subsequent to the reorganization of the Army in 1860.

- 22.**—Ratios of Sickness and Mortality for the Native Army for the year 1861.

23. „ „ „ „ 1862.

24. „ „ „ „ 1863.

JAILS.

Ratios of Sickness and Mortality for the JAIL POPULATION of the Bengal Presidency, shown also in relation to each Province.

- 25.**—Ratios of Sickness and Mortality for the Jail Population for the year 1859.

26. „ „ „ „ 1860.

27. „ „ „ „ 1861.

28. „ „ „ „ 1862.

29. „ „ „ „ 1863.

- 30-33.**—Tabular Statements showing, in aggregate, the number of Admissions and Deaths from each Disease, as specified in the Annual Returns furnished by Batteries, Regiments, and Jails. For European Troops the summary is given for each of the four years 1860-63; for Native Troops, for the three years 1861-63; and for Prisoners for the five years 1859-63.

EUROPEAN TROOPS, 1853-1857.

COMPARATIVE STATEMENT of the ratios of SICKNESS, MORTALITY, and INVALIDING for the EUROPEAN TROOPS on the Strength of the BENGAL PRESIDENCY, including the Regiments serving in BURMAH and PEGU, during the five years previous to 31st March, 1857.

							205.15	204.56	26.62	34.97

* An average for the two years will more accurately represent for each the extent of Invaliding in 1859 and 1860. The change in the period of furnishing the Annual Returns of the Army, introduced from 1st January 1860, rendered necessary a special Return for the 9 months from 1st April to 31st December 1859, as a substitute for the usual Annual Return of 1859; the Invaliding of the two seasons has, in consequence, in many instances, been mixed up. On the Average of the two years, 38.97 per 1000 were invalided in 1859 and 1860.

EUROPEAN TROOPS, 1859-63.

TABLE showing in a comparative form the extent of the PREVALENCE of the PRINCIPAL DISEASES, and the LOSS BY DEATH from the CHIEF CAUSES OF MORTALITY in each Year of the FIVE-YEAR PERIOD 1859-63, in the various PROVINCES of the BENGAL PRESIDENCY.

PROVINCE.	Daily sick per cent. of Average Strength.	Admitted per cent. of Average Strength.	ADMITTED INTO HOSPITAL PER CENT. OF AVERAGE STRENGTH.										DIED IN HOSPITAL PER 1000 OF AVERAGE STRENGTH.

EUROPEAN AND NATIVE ARMIES, 1860-63.

TABLE showing in detail the CAUSES of ADMISSIONS into HOSPITAL, and of DEATHS in HOSPITAL, for the EUROPEAN and NATIVE ARMIES of the BENGAL PRESIDENCY, since the introduction of the System of Statistical Nomenclature now in use.

The Results shown in the case of the European Army should not be critically compared with those contained in the Tables which follow; the details here given represent, in summary, the number and causes of Admissions and Deaths shown in the Annual Returns furnished by Regiments, and these, in some years, it has been found impossible to obtain in a state of completeness.

Peritonitis	12	6	9	7	20	13	4	3	14	8

* It is evident that in all cases the actual Cause of Death is not recorded, the death being returned in some instances under the heading of the Disease which was originally the Cause of Admission into Hospital.

* The data upon which to base a normal Death-rate for the Native Army in any year, are not afforded in a register of mortality such as is furnished in the Returns from which the present Series of Tables is compiled. From the Annual Nominal Roll of Deaths for 1864 we find, that 694 men died in hospital, on outpost duty, and while at home on furlough; and even this roll is, perhaps, in respect to certain regiments incomplete. With the addition of the deaths which are not accounted for in these Tables, the Death-rate of the year, including in the Strength of the Army men on leave at their homes, may be estimated at 15 per 1000.

NATIVE TROOPS, 1864.

* It has not been considered expedient to introduce in this Series, the Table showing the prevalence of Small-pox in 1864 in each of the Jails of the Presidency. Although true Small-pox appeared widely as an epidemic in nearly every Province, the deaths among the Jail Population were limited to six Jails;—the Patna, Benares, Mirzapore, and Nursingpore Jails, which afforded each a fatal case,—the Mymensing Jail, which had two deaths,—and the Dacca Jail which had four deaths from Small-pox: these ten deaths represent the total mortality for the year. Of the 575 cases noted as Variola, 520 occurred in the Jails of Bengal Proper; but, although returned as Variola, the disease appears to have been a mild Varioloid, and the ratio of Deaths to Admissions is, therefore, an untrue ratio for genuine Small-pox. Many cases of Varicella are recorded in the same jails, while other jails of the Province appear to have been attacked by Varicella only; 353 cases were returned as Varicella, with no casualty.

JAILS OF THE BENGAL PRESIDENCY, 1864.

* The Deaths returned under the headings "Intermittent and Remittent Fever" were in reality, almost without exception, caused by Jail Typhus. It has been found impossible to separate even this Disease from the general Class of Fevers; and the ratio must, therefore, simply be regarded as influenced by the prevalence of Jail Fever and not as significant of a death-rate applicable either to one variety of fever or another.

JAILS OF THE BENGAL PRESIDENCY, 1864.

COMPARATIVE STATEMENT of the ratios of SICKNESS and MORTALITY among the JAIL POPULATION in the various Provinces of the BENGAL PRESIDENCY, for the year 1864.

DISEASES.	BENGAL PROPER AND ASSAM.				DINAPORE, BENARES, OUDE, AND CANNPORE DISTRICTS.				NAGPORE & CENTRAL INDIA.				AGRA, MEERUT, AND ROHIL-KUND DISTRICTS.				PUNJAB.				BENGAL PRESIDENCY.

* Jail Fever in the Raipore, Cawnpore, Futtebghur, Agra, Delhi, Umballa, Umritsur, Lahore, Goojranwalla, Mooltan, and Rawul Pindee Jails. The casualties from this disease may be estimated at nearly 1200, or a third of the total mortality of the year, if the deaths from sequelae of the fever be taken into account.

JAILS OF THE BENGAL PRESIDENCY, 1864.

In employing the Statistics of a floating as distinguished from a permanent population, it is necessary to keep in view the fact that we are dealing with two quantities which cannot be accurately represented by the same ratio. The Average Strength is a fixed quantity in the one case; in the other, it represents a larger number of individuals than is shown by the average for any period, whose risk has been incurred for a portion of the period only. When, therefore, we give ratios in the same tabular form for European Troops and for Jails, this distinction must be noted, for in so far, they do not admit of comparison. As an index of results with which to compare future or past experience, such ratios are of value as furnishing an approximate estimate—for no rates can be positive when applied to an unstable body of men; and the nearness with which the Jail population maintains its average strength uninterruptedly throughout a series of years entitles us to conclude, that the aggregate of prisoners included in the risk from year to year is nearly identical. For three years past the average strength of the Jail Population of the Presidency has scarcely altered; in these Tables it is reckoned for those years at 52,871, 52,401, and 52,593, and for the first six months of 1865 the average is 52,666; and the same holds good in regard to Provinces. When, therefore, we say that in such a year, with an aggregate of so many prisoners and a daily average of so many, a certain number have died per 1000; and again, that in a second year, with an equal number in the aggregate and in the average, three times the number have died, the ratios in either case are perfectly comparable. It is quite a tangible fact, even when reduced to ratios, that three times the number of prisoners have died annually in the Jails of the Punjab since the introduction of Typhus in 1861, or that when Cholera dies out in any province, the mortality is diminished by so much. When, however, we come to tabulate in ratios the results for individual jails, the results become the less satisfactory the smaller the numbers of prisoners, and the longer the period to which the ratios refer. The daily sick rate of each month is of an approximate value; the annual admission-rate and death-rate are much less to be relied on, as applicable to the number among whom the risk of succumbing to prison influence has been distributed. The statistical record of the population of a jail must, in fact, be regarded as a register of events, apart from their inclusion in a system of calculations. The reduction to ratios of details which have no significance in themselves, or in their immediate bearing, is useless, and the ratios so recorded are constantly liable to misinterpretation.

JAILS OF THE BENGAL PRESIDENCY, 1864.

TABLE showing the ratio in which the PRINCIPAL DISEASES have contributed to make up the ADMISSION-RATE of the Year in the Jail Hospitals of the BENGAL PRESIDENCY.

STATIONS.		Average Strength, for the Year.	ADMITTED INTO HOSPITAL PER CENT. OF AVERAGE STRENGTH.											Admitted per Cent. of the Average Strength from all Causes.	
			Cholera.	Fever, Intermittent.	Fever, Remittent and Continued.*	Dysentery & Diarrhea.	Hepatitis.	Spleen Disease.	Respiratory Diseases.	Phthisis Pulmonalis.	Dropsy.	Atrophy & Anemia.	Scurvy.		All other Causes.

* In classing Intermittent Fevers, and Remittent and Continued Fevers separately, in place of including both groups under the general head "Fevers," it was intended that the predominance of the ratios should indicate those Jails in which Jail Typhus had prevailed. The object, however, is incompletely fulfilled, since in some Jails it has become the custom to return a certain number of cases of fever regularly as Remittent or Continued, while others return all fevers as Intermittent.

STATIONS.		Average Strength for the year.	ADMITTED INTO HOSPITAL PER CENT. OF AVERAGE STRENGTH.											Admitted per cent of the Average Strength from all Causes.
			Cholera.	Fever, Intermittent.	Fever, Remittent and Continued.	Dysentery & Diarrhea.	Hepatitis.	Spleen Disease.	Respiratory Diseases.	Phthisis Pulmonalis.	Dropsy.	Atrophy and Anæmia.	Scurvy.

Sixteen names appear in the Death Rolls of Regiments of men who are not included in this Return, and which have not appeared in the current Record of Mortality. The deaths of men detached on Staff employment, of small bodies of Invalids which have furnished no returns, and of a few men who have been left behind unable to proceed with their Regiments on the march, are comprehended in this total. These sixteen deaths make an addition to the mortality of the year of .43 per 1000.

	858	44	24·24		639	1097 46·87

Sixteen invalids died in this Presidency before embarking for England. The names of these men appear both in the Death Roll and in the Invaliding Roll, and a deduction should be made from the total loss accordingly. But if the sixteen deaths alluded to in the note to Table 1, be added to the deaths shown in this Table, the ratio of loss by death and invaliding will remain, as shown above, 71·11 per 1000.

* Including Anæmia.

EUROPEAN TROOPS, 1865.

XIV.

Gain and Loss of the Bengal Army in Strength during the year.

At Head-Quarters and on Detachment on 1st January 1865	37,647

	{ in other Hospitals			...	76
Causes of decrease not stated	17
Total Loss of the year					6,133

Strength of the Army at the close of the year, including all men borne on the Roll who are in India. 37,498

This Table is a compilation from Regimental Statements. It refers to Regiments and Batteries which have served throughout the year in the Presidency. Regiments which arrived from Europe towards the end of 1865 are not included, while those which have proceeded to England are reckoned as at the date of their departure; hence the number stated as remaining at the close of the year, cannot be regarded as strictly accurate.

EUROPEAN TROOPS, 1865.

* Late 3rd European Regiment.

† Including the detachment at Cawnpore.

The contents of the Regimental Tables must not be regarded as an accurate local record of sickness and mortality, such as is contained in the general tables showing the relation of disease to locality and to season. The Annual Regimental Returns of which they are an abstract, are supposed to include the medical history of every individual borne on the Rolls during the year, whether present with the Regiment or not.

ABSTRACT of the Returns showing the ADMISSIONS, DEATHS, and INVALIDING of each REGIMENT. 2.—REGIMENTS of ROHILCUND, MEERUT, AGRA, and CENTRAL INDIA.

* No return received.
* * Excluding the Admissions, Deaths, and Invaliding of Convalescent Depôts and General Hospitals, which are supposed to be included in the Annual Regimental Return. In many cases, however, the Admissions are not included, and if these be added to the total here given, the Admission-rate will be increased to 161 per cent.
+ Chiefly Delhi scores.

The Sickness and Mortality of the Bhootan Field Force is shown in a separate Statement; the Average Strength of this Force for the twelve months, added to that given in this Table, will represent the average number of the men of the Regular Native Army present with their regiments during the year.
 * The deaths of men who died absent from their regiments, are not comprehended in this Statement. Excluding the men of the regiments which chiefly suffered in the Bhootan Dooras, upwards of 200 men of the Native Army are known to have died during the year in the hospitals of other regiments, and at their homes. Reckoning the number absent on furlough at 10 per cent., the actual death-rate of the year may be estimated at 19 per 1000.

NATIVE TROOPS, 1865.

II.

TABLE showing the SICKNESS and MORTALITY among the NATIVE TROOPS of the BHOOTAN FIELD FORCE during the year 1865, and the prevalence of the principal Diseases in each Month of the Year.

The Force lost by Death and Invaliding upwards of 2000 men. In addition to the deaths above recorded, 127 men, belonging to the regiments which chiefly suffered, died while at home on sick-leave during the year, or at the Stations to which their regiments were transferred after quitting the Force; and upwards of 1300 were sent away from time to time to their homes for change of climate.

* The Average Strength, 5084, is the average of the 10 months, January to October. The minimum, 3681, was reached in October, when upwards of 1300 men had been sent away sick; the addition of the Strength of the Invalids to the Minimum Strength gives a total closely approximating to the Average of the ten months. The increase of November and December was caused by the arrival of new regiments, by which the Force was supplemented, which had no experience of the special climate of the Doocars up to the close of the year.

NATIVE TROOPS, 1865.

The Bhopal Battalion has not supplied during the year the Returns from which this Statement has been prepared for the other Central India Corps. This Regiment, with a Strength of 730 men, had 20 deaths, of which 5 were from Cholera; the death-rate is 27.40 per 1000.
* Including men who died on outposts.
** The Daily Sick-rate and the Admission-rate of this Force is under-estimated in such a Statement as is here given, since the outposts, to which no Medical Officer is attached, furnish no details such as can be incorporated in the Returns received from the Head Quarters of each Regiment.

* From Chittagong and Barrackpore.

XVII.

39

* From Mooltan. * * The Admissions and Deaths from Cholera occurred while this Regiment was on the march to Rhyootan. The aggregate of the Admissions of the Native Army shown in the Monthly Statements is 66,976, and in the Annual Returns 66,352, while the Strength given in the Annual Return includes Detachments which have furnished no Returns during the year, and which, therefore, show no Admissions. The Total of the Deaths of the year shown in the General Death Table is 1,293, and in the Regimental Statements 1,274; in several instances the Annual Returns do not include the Deaths of men who have died absent from their Regiments, whose names are contained in the Nominal Death Roll.

* From Mooltan. * The Admissions and Deaths from Cholera occurred while this Regiment was on the march to Bhootan.

ABSTRACT of the ADMISSIONS and DEATHS of each REGIMENT of the NATIVE ARMY. 4.—REGIMENTS of the PUNJAB FRONTIER IRREGULAR FORCE.

* This is an excessive and unfair death-rate for the Province. Owing to local causes, 466 deaths occurred in the Lucknow Jail alone; and if these be deducted from the total, the mortality for the rest of the Province is represented by a ratio of 46.64 per 1000.

JAILS OF THE BENGAL PRESIDENCY, 1865.

Peshawur

The Sudden Deaths out of Hospital amounted in all to 27, and give a ratio of 50 per 1000, which should be added to the ratio shown in the first Table of the Series; it has not been thought necessary to specify in this Table the ratio of these deaths for each Jail.

JAILS OF THE BENGAL PRESIDENCY, 1865.

IX.

TABLE showing the Ratio in which the PRINCIPAL DISEASES have contributed to make up the ADMISSION-RATE of the year in the Jail Hospitals of the BENGAL PRESIDENCY.

STATIONS.	Average Strength for the year.	ADMITTED INTO HOSPITAL PER CENT. OF AVERAGE STRENGTH.											Admitted per cent. of the Average Strength from all Causes.	
		Cholera.	Fever, Intermittent.	Fever, Remittent and Continued.	Dysentery and Diarrhea.	Hepatitis.	Spleen Disease.	Respiratory Diseases.	Phthisis Pulmonalis.	Dropsy.	Atrophy and Anæmia.	Scurvy.		All other Causes.

* The ratios for the year are framed on an average which includes the strength of the troops withdrawn from this province in November for the purpose of forming the Camp at Agra; the Admissions and Deaths of November of these regiments, although not shown in this Statement, have been added in making the calculations for the year. A ratio of .82 per 1000, the equivalent of four deaths which occurred while the troops from this Division were in Camp at Agra, is required to make up the Death-rate of 15.30 here shown.

EUROPEAN TROOPS, 1866.

Strength of the Army at the close of the year, including all men borne on the Roll who are in India* * ...	142	5,912	3,216	25,583	34,853
<div> <div>ABSTRACT.</div> <div> <div>Remained on 1st January 1866 37,168</div> <div>Added during 1866 ... 4,490</div> <div>Total 41,658</div> <div>Deduct loss during 1866 ... 6,805</div> <div>Remain at close of year ... 34,853</div> </div> </div>					

* Six Deaths of men who died absent on staff employment, are not included.

* * This Table is a compilation from the Statement furnished by each Regiment. It has reference to Regiments and Batteries which have served throughout the year in the Presidency. Regiments which arrived from Europe at the end of 1866 are not included, while those which proceeded to England towards the close of the year, are reckoned as at the date of their departure; hence the number stated to be remaining must not be regarded as representing the actual strength of the Army of the Presidency on 31st December.

5.—GENERAL HOSPITALS, DEPOTS,

1	Kidderpore Hospital, January to June
2	Chinsurah Depot†
3	Chunar Invalid Garrison

a From England.

† Reorganized from Local Regiments.

* Of the 36 deaths in Regiments which occupied Hill Stations during 1866, 16 only actually took place in the Hills; the remaining 20 deaths occurred before the Regiments reached and can be regarded as furnishing a correct index of the relations of disease to a special locality. The 101st suffered from Cholera while with the Durbur Camp at Agra, and the were occupied. The diseases of men invalided from the Head-Quarters of the 53th Regiment are attributed generally to the climate of Benares, 7 cases only being noted as

† The Fort William Depôts were transferred to Chinsurah from the 1st July 1866; the invaliding noted under Chinsurah Depot includes men invalided early in 1866 from the

2. NATIVE ARMY, 1866.

As in the Returns of previous years, the General Tables which follow show the Sickness and Mortality of those men of the Native Army only who were under observation from week to week throughout the year. The Average Strength of men present with their Regiments and included in the current register of sickness, has varied very little during the past five years, and the results for each year can therefore be satisfactorily compared. The Average Strength of 1863 is reckoned as 37,459; of 1864, 37,225; of 1865, 37,213; and of 1866, 37,423.

In estimating the actual Death-rate of the Native Army of any year, it is necessary to supplement such Tables by the addition of all absent deaths, and to reckon the Death-rate upon the Average Strength of men borne on the Regimental Rolls. The absence on furlough and sick-leave of a certain percentage of the Army in every year, and the fact that, in many instances, the strength of small detachments given off by Regiments is not included in the Head-Quarter Return, necessarily renders the record of each week or month incomplete.

In the present year, the Actual Strength of the Regular Army borne upon the rolls was, at the beginning of the year, close upon 43,000; and at the end of 1866, the additions of the year having exceeded the losses, the number remaining was above 44,000. Upon an average of 43,500, the Death-rate of the year is 18.50 per 1000, the equivalent of 804 deaths.

To the total of 448 deaths shown in the first Table of the series, 356 absent deaths, not accounted for in the current record of mortality, require to be added. Of the men invalided for exchange from the Regiments which served throughout the Bhootan Campaign of 1865, 169 are known to have died. As approximately correct, it may be stated that, exclusive of the Regiments which suffered in Bhootan, 80 men of the Regiments serving in Lower and Eastern Bengal died while on furlough or sick-leave; in the Regiments of the Benares, Oude, and Cawnpore Divisions, there were 25 absent deaths; in the Regiments of Meerut and Rohileund 19, exclusive of 7 men of the Sappers and Miners who died while on duty at Bhootan and Peshawur; in the Regiments of Agra and Central India, 12; and in those of the Punjab, 44. The total deaths of each corps are given in the Tables exhibiting the Statistics of the Army by Regiments.

2. NATIVE TROOPS, 1866.

I.

TABLE showing the SICKNESS and MORTALITY among the NATIVE TROOPS serving in the BENGAL PRESIDENCY during the year 1866, and the prevalence of the principal Diseases in each Month of the Year.

(This Statement is for the Regular Native Army only, and for men present from month to month with their Regiments.—See introductory note.)

The Local Corps of Central India furnish many small out-posts from which no Returns are received. The Strength shown in this Table represents men present with Head-Quarters and larger Detachments only. The actual Strength may be reckoned as 4,880, and the Death-rate per 1,000 at 9.61. The following Statement is drawn up from Regimental details.

Strength borne on the rolls on 1st January 1866	4,891
Additions received during the Year	326
Total	5,217
Deaths at Head-Quarters, 26; on Detachment, 13; on Furlough, 8.	353
Invalided for discharge, 34; otherwise discharged, 272
Remaining on the rolls of the Regiments on 31st December	4,864

NATIVE TROOPS, 1866.
IX.

TABLE showing the SICKNESS and MORTALITY among the NATIVE TROOPS composing the PUNJAB IRREGULAR FORCE during the year 1866, and the prevalence of the principal diseases in each month of the year.

The remarks appended to the Table showing the statistics of the Central India Force apply equally to the Punjab Force. Absence on furlough and the omission of the smaller detachments, reduces the strength by nearly 2,000. The actual death-rate is 9.20 per 1,000, the equivalent of 110 deaths in a body of 11,950 men. The Gain and Loss Statement for the Force is as under.

Strength borne on the regimental rolls on 1st January 1866	11,954
Additions received during the year	1,059
Total							13,013
Deaths at Head-Quarters and on Detachment, 72; died on Furlough and Sick-leave, 38	}	1,083
Invalids for discharge, 205; discharged otherwise, 768		
Remaining on the rolls on 31st December 1866	11,930

* Reference to the Cholera Table of the year shows, that as regards the Jail population of the East of the Presidency, Cholera did not extend westward beyond the Behar Provinces, no death from Cholera being shown in any Jail of the Benares, Oude, or Cawnpore Districts, while every Jail of the Behar Provinces suffered. The Cholera area was also the area affected by Famine in 1866, and hence the rate of Jail mortality is excessive, being for the Jails of Chota Nagpore and the Behar Provinces 113.24 per 1000. The western half of this Province presented all the characteristics of a non-epidemic year; and, in contrast, the Jails of Benares, Oude, and Cawnpore give, with a Strength of 13,529, a death-rate of 23.73 per 1000, if the deaths from Jail typhus be excluded, which, as an epidemic, does not come forward in relation to the general prevalence of special climatic agencies. In the first six months of 1866, 550 prisoners died from Jail fever in the Lucknow, Gondah, Baraatch, Sultanpore, and Allahabad Jails.

JAILS OF THE BENGAL PRESIDENCY, 1866.

* Old age.

† The Jails in which Jail-fever appeared as an Epidemic in 1866, are mentioned in the notes to Tables II. and VI.

† Since the Cholera Table of 1866 was printed, an Annual Return has been received from the Jail at Futtehpore, in which 31 Cholera admissions and 12 deaths appear. This Jail has hitherto been regarded as a lock-up. Previous to 1866, it furnished no Returns, and the results of 1866 have not been incorporated in the General Return for the year. It is important to note this outbreak of Cholera as an apparent exception to the general statement made in the note to Table III, and to the facts of distribution shown in the Cholera Table of 1866.

JAILS OF THE BENGAL PRESIDENCY, 1866.

XII.

DETAIL of the ADMISSIONS and DEATHS of the JAIL POPULATION of each PROVINCE.

A Summary of the Annual Returns of the Jails of the Presidency.

Admitted per cent. of the Average Strength in each Month.															
	9.87	8.68	9.08	12.56	11.08	10.70	14.96	12.37	14.49	16.91	12.52	11.93	141.25		

* The Admission-rates and Death-rates in this Table are calculated on a Strength of 34,603, the average of the 10 months from January to October. Upwards of 6000 men were withdrawn from the Bengal Presidency in the last weeks of the year, and to replace these no substitutes had been received up to the close of 1867. The Average of the 10 months very nearly approximates to the Strength actually under observation throughout the year. In Table XV. showing the Distribution of the Army on 24th June, the Strength is noted as 34,665.

EUROPEAN TROOPS, 1867.

which the 77th Regiment suffered so severely ; but dysentery of a bad type became prevalent, and 15 deaths from dysentery and hepatitis occurred during these months. by a Regiment during the year. The deaths from fever in the 90th Regiment occurred while the Regiment was on the march from Nowsbera to Subathoo, and the this Presidency. With three exceptions, these names have already appeared in the loss of the Presidency, in the Invaliding Rolls of 1866 and 1867.

2. NATIVE ARMY, 1867.

It is to be noted, that in the General Tables the figures are stated to represent the sickness and mortality of a strength of 39,114, and in the Regimental Tables, of 41,516, a difference of 2,400 men. This difference represents the strength of outposts and detachments furnishing no Returns of Sickness, and yet included in the strength of their regiments as present throughout the year. As a record of sickness, the ratios on the lower strength are the more accurate; but the true ratio of mortality must be calculated with reference to all ascertained deaths, absent as well as present, and upon the full strength of men borne on the regimental rolls. Table XIII shows that the strength upon which the death-rate of the year should be calculated is 45,500. With 763 deaths, this strength gives a ratio of 16·77 per 1000, which may be taken as the death-rate of the year, although it is probable that, in some instances, the deaths of men absent at their homes are unrecorded.

NATIVE TROOPS, 1867.

I.

TABLE showing the SICKNESS and MORTALITY among the NATIVE TROOPS serving in the BENGAL PRESIDENCY during the Year 1867, and the prevalence of the principal Diseases in each Month of the Year.

(This Statement is for the Regular Native Army only, and for men present from month to month with their Regiments. The deaths of men who died in the Hospitals of other Regiments have not been included; these are reckoned among the deaths of men absent from their Regiments.—See introductory note.)

ABSTRACT.					
Remained on 1st January 1868	33,195	
Added during 1868	5,922	
Total	39,117	
Deduct Loss during 1868	4,547	
Remain at date of Return	34,570	

* The Regiments received on the strength of the Army during the year which landed after the 1st January, return their strength as at the date of their arrival in India; hence, in the present year, the strength shown in the beginning of the year approximates not to the strength of January, but of May, as it appears in the leading Table. The excess over the strength of May, of 450, which is shown in this statement, results from the fact of the recruits remaining in the Bombay Depôts having been included as portion of the regimental strength.

The number shown as remaining is also in excess of the actual, as the regiments which left the Presidency before the end of December are included, and their strength given as at the date of departure.

† It is obvious that the loss above recorded is not an absolute in the case of the 1,021 men who were transferred to other regiments.

† Died while absent on Staff employment.

EUROPEAN TROOPS, 1868.

2. NATIVE ARMY, 1868.

The regimental strengths upon which the actual death-rate of the year is calculated are taken as at 1st April. The total very closely approximates to the average for the year. The total deaths, absent and present, amount to 744, and this number, with a strength of 45,844, represents a loss of 16·23 per 1,000. The deaths of men present with their regiments amounted to 444, giving a ratio of 10·89 per 1,000 in relation to a strength of 40,770 men, the average present during the year.

NATIVE TROOPS, 1868.

I.

TABLE showing the SICKNESS and MORTALITY among the NATIVE TROOPS serving in the BENGAL PRESIDENCY during the Year 1868, and the prevalence of the principal Diseases in each Month of the Year.

(This Statement is for the Regular Native Army only, and for men present from month to month with their Regiments. The deaths of men who died in the hospitals of other Regiments have not been included; these are reckoned among the deaths of men absent from their Regiments—See introductory note.)

	820	805	951	723	724	826	770	880	993	1,065	958	787	10,307		
Admitted per cent. of the Average Strength in each Month.															
	10.37	9.62	11.01	8.93	9.22	10.59	9.88	11.16	12.66	13.35	12.15	10.59	129.47		

* The discrepancy between the results here shown, and the results for the same Province exhibited in Table XIV, arises from the different distribution of absent and present deaths; for example, the 11 deaths of the 7th Native Infantry caused by cholera on board boats on the Bhurnpooter were excluded from the provincial statement and included among deaths on the march.

NATIVE TROOPS, 1868.

* The Strength is taken as on 1st April; in a few cases the average strength for the year exceeded the strength at this date from the recruits of the year having been received subsequently. The loss by death and invaliding is calculated on the maximum strength, and the admission rate on the average present throughout the year as shown in the second column.

TROOPS, 1868.

† Calculated on the Average Strength for 12 months.

2. NATIVE ARMY, 1869.

The regimental strengths upon which the actual death-rate for the year is calculated are taken as at 1st April. The total at this date very closely approximates to the average for the year. The total deaths, absent and present, amount to 938, and this number with a strength of 45,952 represents a loss of 20·41 per 1,000. The deaths of men present with their regiments amounted to 693, giving a ratio of 17·29 per 1,000 in relation to a strength of 40,080, the average present during the year.

NATIVE TROOPS, 1869.

I.

TABLE showing the SICKNESS and MORTALITY among the NATIVE TROOPS serving in the BENGAL PRESIDENCY during the Year 1869, and the prevalence of the principal Diseases in each Month of the Year.

(This Statement is for the Regular Native Army only, and for men present from month to month with their Regiments.)

													6,083		
Admitted per cent. of the Average Strength in each Month.															
													151.70		

The Total Strength of the Corps of the Central India Force was approximately 4,920, and out of this strength the deaths were 89; this gives a ratio of 18.09 per 1,000. The Gain and Loss Statement for the year is as under—

Strength borne on the Rolls on 1st January 1869	...	4,928
Additions received during the year	...	373
TOTAL		5,301
Deaths at Head-quarters 54, on Detachment 24, on Furlough 11, Invalided for Discharge 41,	...	384
Otherwise discharged 254
Remaining on the Rolls of the Regiments on 31st December	...	4,917

* In several regiments many cases of fever were treated out of Hospital; the ratio for intermittent fever should in reality be much higher than is here shown.
† In some instances where men died from cholera away from their regiments no admission is entered; this ratio, therefore, should be somewhat lower than is here shown.

NATIVE TROOPS, 1869.

IX.

TABLE showing the SICKNESS and MORTALITY among the NATIVE TROOPS composing the PUNJAB IRREGULAR FORCE during the Year 1869, and the prevalence of the principal Diseases in each Month of the Year.

MONTHS.	Average Strength.	Average Number Daily Sick.	Number Daily Sick per cent. of Strength.	Number of Deaths.	Died per 1,000 of Strength.	CAUSES OF DEATHS IN HOSPITAL.																	Died out of Hospital.

	767	576	703	631	791	1,014	853	2,340	3,419	4,518	4,098	1,935	21,615		
Admitted per cent. of the Average Strength in each Month.															
	6.35	5.15	6.33	6.04	8.21	10.19	8.93	24.78	36.07	48.45	39.63	17.71	211.85		

Calculated on a Strength of 12,350, which approximately represents the Total Strength, absent as well as present, the Death-rate of the year is 26.72 per 1,000, the equivalent of 330 deaths.

The Gain and Loss Statement for the Frontier Force for the year was as under—

Strength borne on the Regimental Rolls on 1st January 1869	12,478
Additions received during the year	1,116
TOTAL						13,594
Deaths at Head-quarters and in Detachments 259, died while on Furlough and Sick Leave 71, Invalided for						330
Discharge 255, Transfers given 45, Discharged otherwise 714	1,374
Remaining on the Rolls at the close of 1869	12,220

* Chiefly convulsion and coma occurring during the course of intermittent fever, returned under the head of Apoplexy.

NATIVE TROOPS, 1869.

* Died while on Detachment duty at Dacca. † Five of these deaths occurred in the Detachment at Berhampore.
† Attacked on the march from Mooltan. The 45th Regiment, which relieved the 10th Native Infantry at Mooltan, lost on the march from Peshawur and after arrival at Mooltan, 8 men from pneumonia. The 15th Madras Native Infantry, marching to Nowgong, was also attacked with pneumonic disease. The Medical Officer of this Regiment remarks, that the disease appears to be communicable from one man to another, and that jaundice more or less intense in character, complicated all these cases of pneumonia.

* A man of the 15th Madras Native Infantry, who died on the march to Nowgong immediately after leaving Allahabad. The families of this regiment contracted cholera in Calcutta, and twelve cases appeared among them on the journey by railway from Calcutta to Futtehpore. Of the eleven remaining cases of cholera, two occurred at Banda in August, three at Nowgong in June, July and August, two at Saugor in August, and four at Jubbulpore in April, August and September.

* Of these Cholera Deaths, none belong properly to this Province. The deaths of August and September occurred at Muttra, which was the last station struck by the Cholera of Central India in its advance towards the North-West; and a single fatal case at Delhi, in the spring, indicated the existence of the same Cholera and the probability of invasion later in the year. The four remaining deaths, which occurred at Shahjehanpore and Bareilly, were associated with the great Cholera of the East, shown in the opposite Table.
† This column of ratios is calculated after including the admissions of the depôts at Nynce Tal and Landour for the year; these admissions do not appear under the months or in the totals, since no record can now be found in which the distribution by months is shown.
‡ These ratios take the place of the ratios shown on the Table of 1860 which stands on page 59.

JAILS OF THE BENGAL PRESIDENCY, 1859-64.

TABLE showing in detail the ADMISSIONS and DEATHS of the JAILS of BENGAL PROPER and ASSAM during the six Years from 1859 to 1864.

The five Tables here appended show the distribution by Provinces of the Totals for the Presidency entered at pages 32 and 156. On the figures of this Table and the four which follow, as far as these have reference to the years from 1859 to 1863, the ratios of the Tables on pages from 25 to 29 are calculated. The provincial details for 1864 supply for this year a defect which is remedied in the Jail Tables of subsequent years by the addition of Table XII.

CAUSES OF ADMISSIONS AND DEATHS.	NUMBER OF ADMISSIONS AND DEATHS.

* In order to maintain the ratios shown in the Tables pages 25 to 29, for the years from 1859 to 1863, the prisoners at Delhi have not been included in the Jail Population of the Punjab, as in the years from 1864 to 1869. Considering the extreme fluctuations in these years of the death-rate of the two Provinces affected, the position occupied by this solitary jail is of little importance.

JAILS OF THE BENGAL PRESIDENCY, 1860.

TABLE showing the MORTALITY in each JAIL, the CAUSES of DEATH, and the RATIO of DEATHS to STRENGTH.

STATIONS.	Average Strength for the year.	CAUSES OF DEATHS.													Number of Deaths.	DIED PER 1,000 OF AVERAGE STRENGTH.			
		Cholera.	Smallpox.	Fevers.	Apoplexy.	Dysentery and Diarrhoea.	Hepatitis.	Spleen Disease.	Respiratory Diseases.	Heart Diseases.	Phthisis Pulmonalis.	Dropsy.	Scurvy.	Atrophy and Anæmia.		Wounds and Accidents.	All other Causes.	A.—Cholera.	B.—All Causes.

* The ratios in this Table, and in others of the series from 1859 to-1863, differ slightly from those given in the Abstract for the same years as printed on pages 25 to 29. The ratios of these Abstracts were drawn from the figures furnished in Annual Returns, and in a few cases the aggregate of the Admissions and Deaths has since been found to differ from the details as given month by month. In the Table for 1861, the difference of ratio is due to a great disparity between the Monthly and Annual Returns of the Jail at Meerut.

JAILS OF THE BENGAL PRESIDENCY, 1862.

TABLE showing the PREVALENCE of CHOLERA in each MONTH and the DISTRIBUTION of the DISEASE by STATIONS and PROVINCES.

JAIL STATIONS.	Average Strength for the Year.	NUMBER OF ADMISSIONS FROM CHOLERA IN EACH MONTH.												Total Admissions of the Year.	Admitted percent. of Average Strength.	Total Deaths of the Year.	Died per 1,000 of Average Strength.

[illegible]

PERCENTAGE of the TOTAL MORTALITY in each MONTH.

	Jan.	Feb.	Mar.	April.	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.
Deaths of each Month ...	462	490	767	817	423	159	87	116	215	321	346	437
Died per cent. of Total Deaths ...	9·94	10·73	16·50	17·57	9·10	3·42	1·87	2·50	4·62	6·91	7·44	9·40

* Imported from the North-Western Provinces.

† It is impossible to say whether the deaths of these months, which occupy an exceptional position in this Table, were due to specific Jail Typhus or not. Many of the prisoners introduced into the Meerut Jail were drawn from a starving population, and no fewer than 1,187 deaths occurred among the number who passed through this Jail in 1891, of which 288 were ascribed to Fever, Dysentery, and Atrophy. That a specific fever poison was present is well known, and it will be observed that the law of extinction is rigidly followed, as in nearly every other illustration in this table.

INDEX.

EUROPEAN TROOPS.

- ADMISSIONS AND DEATHS—Causes of, shown in detail—1860, 1861, 1862 and 1863, p. 30; 1864, p. 156; 1865, 1866, 1867, 1868 and 1869, in the Summary concluding the Series of Tables of each year.
- AGRA AND CENTRAL INDIA—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1859, p. 41; 1860, p. 57; 1861, p. 73; 1862, p. 89; 1863, p. 105; 1864, p. 121; 1865, 1866, 1867, 1868 and 1869, T. V of the Series for each year.
- BENGAL PRESIDENCY—1852-53 to 1856-57—Comparative Statement of the ratios of sickness, mortality and invaliding, for five years previous to 1857, p. 14.
- BENGAL PRESIDENCY—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1858, p. 1; 1859, p. 37; 1860, p. 53; 1861, p. 69; 1862, p. 85; 1863, p. 101; 1864, p. 117; 1865, 1866, 1867, 1868 and 1869, T. I of the Series for each year.
- BENGAL PROPER—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1858, p. 3; 1859, p. 38; 1860, p. 54; 1861, p. 70; 1862, p. 86; 1863, p. 102; 1864, p. 118; 1865, 1866, 1867, 1868 and 1869, T. II of the Series for each year.
- CENTRAL INDIA—See *Agra*.
- CHILDREN OF EUROPEAN REGIMENTS—Detail of admissions and deaths—1860, 1861, 1862, 1863, p. 20; 1864, p. 156; 1865, T. XIX; 1866, T. XVII; 1867, T. XVII; 1868, T. XXI; 1869, T. XXIII. Prevalence of the chief diseases and causes of mortality in each month—1868, T. XVIII; 1869, T. XVIII. Distribution of deaths by stations—1868, T. XX; 1869, T. XX. Distribution of Cholera—1869, T. XXII.
- CHOLERA—Prevalence of—in each month, 1858, p. 9; 1859, p. 47; 1860, p. 63; 1861, p. 79; 1862, p. 95; 1863, p. 111; 1864, p. 127; 1865, 1866, 1867, 1868 and 1869, T. XI of the Series for each year.
- CONVALESCENT DEPÔTS—Statistics of 1865, Table XVIII; 1866, 1867, 1868 and 1869, final Section of Table XVI of each Annual Series.
- DEATH—Causes of, shown in detail—1858, p. 10; 1859, p. 49; 1860, p. 65; 1861, p. 81; 1862, p. 97; 1863, p. 113; 1864, p. 129; 1865, 1866, 1867, 1868 and 1869, T. XIII of the Series for each year.
- DISTRIBUTION OF THE ARMY OF THE PRESIDENCY—1864, p. 158; 1865, T. XX; 1866, 1867, 1868 and 1869, T. XV of each Annual Series.
- GAIN AND LOSS STATEMENT FOR THE ARMY OF THE PRESIDENCY—For 1865, 1866, 1867, 1868 and 1869, T. XIV of each Annual Series.
- GANGETIC PROVINCES—(Dinapore, Benares, Oude, and Cawnpore.)—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1859, p. ii of Appendix; 1860, p. iv of Appendix; 1861, p. vi of Appendix; 1862, p. viii of Appendix; 1863, p. x of Appendix; 1864, p. 119; 1865, 1866, 1867, 1868 and 1869, T. III of the Series for each year.
- HOSPITALS, Military, of Calcutta, in 1858, p. 2.
- INVALIDING—Causes of, shown in detail, and the ratios for the chief affections causing invaliding—1858, p. 10; 1859, p. 49; 1860, p. 65; 1861, p. 81; 1862, p. 97; 1863, p. 113; 1864, p. 129; 1865, 1866, 1867, 1868 and 1869, T. XIII of the Series for each year.
- MEERUT AND ROHILCUND—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1859, p. iii of Appendix; 1860, p. v of Appendix; 1861, p. vii of Appendix; 1862, p. ix of Appendix; 1863, p. xi of Appendix; 1864, p. 120; 1865, 1866, 1867, 1868 and 1869, T. IV of the Series for each year.
- OUDE—See *Gangetic Provinces*.

- PROVINCES—Ratios for the different Provinces contrasted in each year—1858, p. 7; 1859, p. 43; 1860, p. 59; 1861, p. 75; 1862, p. 91; 1863, p. 107.—(See also Appendix, and foot-notes on pages of Appendix ii to xi); 1864, p. 123; 1865, 1866, 1867, 1868 and 1869, T. VII of the Series for each year.
- PUNJAB—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1858, p. 6; 1859, p. 42; 1860, p. 58; 1861, p. 74; 1862, p. 90; 1863, p. 106; 1864, p. 122; 1865, 1866, 1867, 1868 and 1869, T. VI of the Series for each year.
- RATIOS—See *Provinces and Stations*.
- REGIMENTAL TABLES showing, station by station, the statistics of each Corps—1865, T. XV to XVIII; 1866, 1867, 1868 and 1869, T. XVI of each Annual Series.
- RELIEF OF THE ARMY, for 1866-67 follows T. XV; and for 1867-68, 1868-69, and 1869-70 follows T. XVI of each Annual Series.
- ROHILCUND—See *Meerut*.
- SMALLPOX—Prevalence of, in each month—1858, p. 8; 1859, p. 46; 1860, p. 62; 1861, p. 78; 1862, p. 94; 1863, p. 110; 1864, p. 126; 1865, 1866, 1867, 1868 and 1869, T. X of the Series for each year.
- STATIONS—Daily sick rates of, in each month—1859, p. 44; 1860, p. 60; 1861, p. 76; 1862, p. 92; 1863, p. 108; 1864, p. 124; 1865, 1866, 1867, 1868 and 1869, T. VIII of the Series for each year.
- STATIONS—Annual admission-rates of, for the chief diseases—1859, p. 45; 1860, p. 61; 1861, p. 77; 1862, p. 93; 1863, p. 109; 1864, p. 125; 1865, 1866, 1867, 1868 and 1869, T. IX of the Series for each year.
- STATIONS—Annual Death-rates of, and General Mortality Table—1859, p. 48; 1860, p. 64; 1861, p. 80; 1862, p. 96; 1863, p. 112; 1864, p. 128; 1865, 1866, 1867, 1868 and 1869, T. XII of the Series for each year.
- WAR PROVINCES OF 1858, p. 4 and p. 5.
- WOMEN OF EUROPEAN REGIMENTS—Detail of admissions and deaths—1860, 1861, 1862, 1863, p. 20; 1864, p. 156; 1865, T. XIX; 1866, T. XVII; 1867, T. XVII; 1868, T. XXI; 1869, T. XXIII. Prevalence of the chief diseases and causes of mortality in each month—1868, T. XVII; 1869, T. XVII. Distribution of deaths by stations—1868, T. XIX; 1869, T. XIX. Distribution of Cholera, 1869, T. XXI.

NATIVE TROOPS.

- ADMISSIONS AND DEATHS of the Native Army as a body, shown in detail—1861, 1862 and 1863, p. 30; 1864, Summary, p. 156; 1865, 1866, 1867, 1868 and 1869, in Summary concluding the Series of Tables for each of these years.—(In the Summary for each year, the admissions and deaths of the troops stationed in the Upper and Lower Provinces, are shown separately, and the details for the Central India and Punjab Frontier Forces are also given.)
- AGRA AND CENTRAL INDIA—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1864, p. 135; 1865, T. VI; 1866, 1867, 1868 and 1869, T. V of the Series for each year.—(For 1861, 1862 and 1863, see *Ratios*.)
- BENGAL PRESIDENCY—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1864, p. 131; 1865, 1866, 1867, 1868 and 1869, T. I of the Series for each year.—(For 1861, 1862 and 1863, see *Ratios*.)
- BENGAL PROPER AND ASSAM—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1864, p. 132; 1865, T. III; 1866, 1867, 1868 and 1869, T. II of the Series for each year.—(For 1861, 1862 and 1863 see *Ratios*.)
- BHOOTAN FIELD FORCE—Statistics of, shown month by month—T. II of 1865.
- CENTRAL INDIA IRREGULAR FORCE—1865, T. IX; 1866, 1867, 1868 and 1869, T. VIII of the Series for each year.—(For Regiments of, see *Regimental Returns*.)
- CENTRAL INDIA IRREGULAR FORCE—Detail of admissions and deaths—contained in Summary for each year from 1865 to 1869.
- CHOLERA OF THE NATIVE ARMY—1859, 1860, 1861, 1862 and 1863, p. xii to xvii of Appendix; 1864, p. 140; 1865, T. XIV; 1866, T. XII; 1867, T. XII; 1868, T. XIII; 1869, T. XIII.
- GAIN AND LOSS STATEMENT FOR THE NATIVE ARMY OF THE PRESIDENCY—1866, T. XIII; 1867, T. XIII; 1868 follows T. XIV; 1869 follows T. XIV.
- GANGETIC PROVINCES—(Dinapore, Benares, Oude and Cawnpore.)—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1864, p. 133; 1865, T. IV; 1866, 1867, 1868 and 1869, T. III of the Series for each year.—(For 1861, 1862 and 1863, see *Ratios*.)
- MEERUT AND ROHILCUND—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1864, p. 134; 1865, T. V; 1866, 1867, 1868 and 1869, T. IV of the Series for each year.—(For 1861, 1862 and 1863, see *Ratios*.)
- PUNJAB—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1864, p. 136; 1865, T. VII; 1866, 1867, 1868 and 1869, T. VI of the Series for each year.—(For 1861, 1862 and 1863, see *Ratios*.)

PUNJAB FRONTIER FORCE—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1865, T. VIII; 1866, 1867, 1868 and 1869, T. IX of the Series for each year.—(For Regiments of, see *Regimental Returns*.)

PUNJAB FRONTIER FORCE—Detail of admissions and deaths—contained in Summary for each year from 1865 to 1869.

RATIOS of Sickness and Mortality for the Presidency, and for each Province—1861, p. 22; 1862, p. 23; 1863, p. 24; 1864, p. 137; 1865, T. X; 1866, 1867, 1868 and 1869, T. VII of the Series for each year.

REGIMENTAL RETURNS showing the admissions, deaths and invaliding of each Regiment, station by station—1865, Tables XV to XVIII; 1866, 1867, 1868 and 1869, T. XIV of the Series for each year.

REGIMENTAL RETURNS of the Punjab Frontier Force, and of the Central India Irregular Force—form the concluding sections of the Tables above indicated.

RELIEF, ANNUAL—1867-68 follows T. XIV of 1867; 1868-69 follows T. XIV of 1868; 1869-70 follows T. XIV of 1869.

SMALLPOX OF THE NATIVE ARMY—1864, p. 140; 1865, T. XIV; 1866, T. XII; 1867, T. XII.

STATIONS, DAILY SICK RATES OF—1864, p. 138; 1865, T. XII; 1866, 1867, 1868 and 1869, T. X of the Series for each year.

STATIONS, ANNUAL ADMISSION-RATES OF—1864, p. 138; 1865, T. XII; 1866, T. X; 1867, T. X; 1868, T. XI; and 1869, T. XI.

STATIONS, MORTALITY TABLE FOR—1864, p. 139; 1865, T. XIII; 1866 and 1867, T. XI; 1868 and 1869 T. XII.

JAIL POPULATION.

ADMISSIONS AND DEATHS of the Prisoners of the Bengal Presidency as a body, Detail of—1859, 1860, 1861, 1862 and 1863, p. 32; 1864, Summary, p. 156; 1865, 1866, 1867, 1868 and 1869, in Summary concluding the Series of Tables for each of these years.

ADMISSIONS AND DEATHS of the Prisoners in each Province, Detail of—1859 to 1864, Bengal Proper and Assam, p. xviii of Appendix; Behar Provinces, Benares, Oude and Cawnpore, p. xx of Appendix; Nagpore and Central India, p. xxii of Appendix; Agra, Meerut and Rohilcund, p. xxiv of Appendix; Punjab, p. xxvi of Appendix. For 1865, 1866, 1867, 1868 and 1869, T. XII of the Series for each year gives the detail of admissions and deaths, Province by Province.

AGRA, MEERUT AND ROHILCUND—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1864, p. 145; 1865, 1866, 1867, 1868 and 1869, T. V of the Series for each year.—(For 1859, 1860, 1861, 1862 and 1863, see *Ratios* and Table p. xxiv of Appendix.)

ANNUAL ADMISSION-RATES for the principal diseases in each jail of the Presidency—1864, p. 150; 1865, 1866, 1867, 1868 and 1869, T. IX of the Series for each year.

BENGAL PRESIDENCY—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1864, p. 141; 1865, 1866, 1867, 1868 and 1869, T. I of the Series for each year.—(For 1859, 1860, 1861, 1862 and 1863, see *Ratios* and *Admissions and Deaths*.)

BENGAL PROPER AND ASSAM—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1864, p. 142; 1865, 1866, 1867, 1868 and 1869, T. II of the Series for each year.—(For 1859, 1860, 1861, 1862 and 1863, see *Ratios* and Table p. xviii of Appendix.)

CHOLERA OF THE JAIL POPULATION—1859, p. xxxviii of Appendix; 1860, p. xl; 1861, p. xlii; 1862, p. xliv; 1863, p. xlvi, and 1864, p. 152. For the years from 1865 to 1869 T. X of the Series is the Cholera Table for each year.

CONTAGIOUS FEVERS OF THE JAIL POPULATION—Deaths in the more important outbreaks, and the relation of these outbreaks to the influences prevalent at the different seasons of the year—pages xlvii and xlviii of Appendix.

DAILY SICK RATE OF EACH JAIL OF THE PRESIDENCY IN EACH MONTH—1864, p. 148; 1865, 1866, 1867, 1868 and 1869, T. VIII of the Series for each year.

DEATH TABLE FOR EACH YEAR, showing the extent and causes of mortality in each jail of the Presidency—1859, p. xxviii of Appendix; 1860, p. xxx; 1861, p. xxxii; 1862, p. xxxiv; 1863, p. xxxvi; and 1864, p. 154. For 1865, 1866, 1867, 1868 and 1869, T. XI of the Series is the Mortality Table for each year.

GANGETIC PROVINCES—(Dinapore, Benares, Oude and Cawnpore).—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1864, p. 143; 1865, 1866, 1867, 1868 and 1869, T. III of the Series for each year.—(For 1859, 1860, 1861, 1862 and 1863, see *Ratios* and Table p. xx of Appendix.)

NAGPORE (CENTRAL PROVINCES) AND CENTRAL INDIA—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1864, p. 144; 1865, 1866, 1867, 1868 and 1869, T. IV of the Series for each year.—(For 1859, 1860, 1861, 1862 and 1863, see *Ratios* and Table p. xxii of Appendix.)

PUNJAB—General Table showing the sickness and mortality of each month, and the prevalence of the principal diseases—1864, p. 146; 1865, 1866, 1867, 1868 and 1869, T. VI of the Series for each year.—(For 1859, 1860, 1861, 1862 and 1863, see *Ratios* and Table p. xxvi of Appendix.)

RATIOS of Sickness and Mortality for the Presidency and for each Province—1859, p. 25; 1860, p. 26; 1861, p. 27; 1862, p. 28; 1863, p. 29; 1864, p. 147; 1865, 1866, 1867, 1868 and 1869, T. VII of the Series for each year.

A STATISTICAL STANDARD for the European Army of the Bengal Presidency has been based on the results shown in this Volume, for the Ten Years from 1860 to 1869. From 1871 onwards, the statistics of the Madras and Bombay Presidencies have been added in a parallel form; and the Sickness and Mortality of the European Army of India is now represented in a New Series of Tables. The Tables of 1870, the period between the completion of the Standard and the commencement of the New Series, have, therefore, been bound up with statistics of the Twelve Years from 1858 to 1869.

ANNUAL RETURNS

OF THE

EUROPEAN AND NATIVE ARMIES

AND OF THE

JAIL POPULATION OF THE BENGAL PRESIDENCY

FOR THE YEAR

1870.

1. EUROPEAN TROOPS.

TABLE.

Sickness and Mortality among the European Troops serving in the Bengal Presidency during the year 1870, and the prevalence of the principal diseases in each month of the year	I
Sickness and Mortality among the Troops serving in Bengal Proper	II
Sickness and Mortality among the Troops serving in the Dinapore, Benares, Oude, and Cawnpore Districts	III
Sickness and Mortality among the Troops serving in the Rohilcund and Meerut Districts	IV
Sickness and Mortality among the Troops serving in the Agra District and in Central India	V
Sickness and Mortality among the Troops serving in the Punjab	VI
Sickness and Mortality among the Troops occupying Hill Stations	VII
Sickness and Mortality among the Troops occupying the Convalescent Depôts during the Hot Season	VIII
Comparative Statement of the ratios of Sickness and Mortality among the Troops serving in the various Provinces	IX
General Statistics of Sickness and Mortality in the principal Military Stations	X
Ratio in which the principal Diseases have contributed to make up the Admission-rate of the year in the chief Military Stations	XI
The Mortality in each Station, the Causes of Death, and the Ratio of Deaths to Strength	XII
Prevalence of Cholera in each month, and the Distribution of the Disease by Stations and Provinces...	XIII
Prevalence of Smallpox in each month, and the Distribution of the Disease by Stations and Provinces	XIV
Prevalence of Fevers in each month, and the Distribution of Fevers by Stations and Provinces	XV
Prevalence of Apoplexy and Sunstroke in each month, and the Distribution of these Diseases by Stations and Provinces	XVI
Detail of the Causes of Death, and the Loss by Invaliding during the year	XVII
Gain and Loss of the Regiments of the Army of Bengal in Strength during the year	XVIII
Admissions, Deaths, and Invaliding of each Regiment and Battery for the year	XIX
1.—Regiments of Bengal Proper.	
2.—Regiments of Behar, Benares, Oude, and Cawnpore.	
3.—Regiments of Rohilcund and Meerut.	
4.—Regiments of Agra and Central India.	
5.—Regiments of the Punjab.	
6.—Regiments cantoned at Hill Stations.	
7.—Presidency Depôt, Invalid Garrison, and Working Parties in the Hills.	
8.—Convalescent Depôts.	

(Annual Relief of the Army, 1870-71—follows Table XIX).

Number of Days spent in Hospital by the Men of each Regiment	XX
Distribution of the Army on 1st July 1870	XXI

(An Index to the two preceding Tables).

WOMEN AND CHILDREN OF EUROPEAN REGIMENTS.

Sickness and Mortality among the Women of Regiments serving in the Bengal Presidency during the year, and the prevalence of the principal diseases in each Month	I
Sickness and Mortality among the Children of Regiments serving in the Bengal Presidency during the year, and the prevalence of the principal diseases in each Month	II
Distribution by Stations of the Deaths of the Women of European Regiments	III
Distribution by Stations of the Deaths of the Children of European Regiments	IV
Distribution by Stations of the Cholera of the Women of European Regiments	V
Distribution by Stations of the Cholera of the Children of European Regiments	VI
Detail of the Admissions and Deaths of the Women and Children of European Regiments	VII

2. NATIVE TROOPS.

Sickness and Mortality among the Native Troops, of the Regular Army, serving in the Bengal Presidency during the Year, and the prevalence of the principal diseases in each month of the year	I
Sickness and Mortality among the Troops serving in Bengal Proper and in Assam	II
Sickness and Mortality among the Troops serving in the Dinapore, Benares, Oude, and Cawnpore Districts	III
Sickness and Mortality among the Troops serving in the Meerut District and in Rohilcund	IV
Sickness and Mortality among the Troops serving in the Agra District and in Central India	V
Sickness and Mortality among the Troops serving in the Punjab... ..	VI
Comparative Statement of the ratios of Sickness and Mortality among the Regular Troops serving in the various Provinces	VII
Sickness and Mortality among the Troops composing the Central India Irregular Force	VIII
Sickness and Mortality among the Troops composing the Punjab Frontier Force	IX
Sickness and Mortality among the Troops, Regular and Irregular, serving Trans-Indus	X
The Daily Sick-rate of each Station in each month	XI
Ratio in which the Chief Diseases have contributed to make up the Admission-rate of each Station	XII
The Mortality in each Station, the Causes of Death, and the Ratio of Deaths to Strength	XIII
Prevalence of Cholera in each month, and the Distribution of the Disease by Stations and Provinces... ..	XIV
Prevalence of Fevers in each month, and the Distribution of Fevers by Stations and Provinces	XV
Admissions, Deaths, and Invaliding of each Regiment	XVI

- 1.—Regiments of Bengal Proper, Bhootan, and Assam.
- 2.—Regiments of Behar, Benares, Oude, and Cawnpore.
- 3.—Regiments of Rohilcund and Meerut.

* The great majority of the cases entered in this Table are cases of Heat Apoplexy, represented by the admissions of the hot months. But as it has been found impossible correctly to separate cases of other varieties of Apoplexy, cases of Sanguineous Apoplexy and Congestive Apoplexy from Fever, Alcoholic poisoning &c., are also included. The few cases entered in the cold months may be generally regarded as cases of Congestive or Sanguineous and not of Heat Apoplexy.

EUROPEAN TROOPS, 1870.

TABLE

8.— CONVALESCENT																	
CONVALESCENT DEPOTS.						Period of Occupation.				Average Strength during the period of occupation.	Admission-rate of 1870 per 1,000 of Strength.	Loss per 1,000					
												By Deaths.	By Invaliding.				
1	Darjeeling	Eight months, April to November	127	1748·0	55·12	251·97				
2	Nynce Tal	Nine months, April to December	381	2023·6	18·37	286·09				
3	Landour	Eight months, April to November	208	1754·8	14·42	206·73				
4	Kussowlie	{ Eight months, from middle of April to middle of December }				511	1242·7	21·53	252·45				
5	Dalhousie	Seven months, April to October	200	1395·0	15·00	110·00				
6	Murree	Six months, May to October	451	804·6	27·03	161·21				
CONVALESCENT DEPÔTS OF THE BENGAL PRESIDENCY										1,945	1367·1	22·62	212·85
EUROPEAN ARMY OF THE BENGAL PRESIDENCY										33,689†	1702·2†	21·31†	52·50†

* The men from Murree were invalided after returning to their regiments.

† Calculated after excluding the strength of the 88th and 103rd Regiments, which took home their invalids.

† As in the corresponding table of last year, the aggregate of the regimental strengths as given exceeds the actual strength by upwards of 300; this excess probably represents men in the depôts of other Presidencies and elsewhere. For the Army of the Presidency, the ratios shown in Table I are to be accepted as the proper ratios of the year.

ANNUAL RELIEF OF

ROYAL ARTILLERY.

A. Brigade	Head Quarters	From Meerut	To Peshawur Arrived	December	1870.
C. Brigade	F. Battery	" Uniballa	" England Marched	February	1871.

					ARMY OF THE PRESIDENCY ...		33,874	744,630†	22.0

* Including the Detachments noted in Table XIX.

† Up to 15th November only.

‡ The number of Hospital diets on which the daily sick of Table I is calculated is 771,974. The addition of the Hospital diets of four regiments which spent a few weeks of 1870 in this Presidency, will contribute towards making up the deficiency between this total and that shown above; but the greater portion is due probably to the fact that many regiments have neglected to enter the diets of men absent at Convalescent Depôts and elsewhere.

EUROPEAN TROOPS, 1870.

XXI.

DISTRIBUTION of the EUROPEAN ARMY of the BENGAL PRESIDENCY on 1st July 1870.

(An Index to the two preceding Tables.)

* See Note to Table XVI, Section 3.

2. NATIVE TROOPS, 1870.

The regimental strengths upon which the actual death-rate for the year is calculated are taken as at 1st January. The difference between the strength of January and December is 228 only, the strength on the 1st January having been 44,731, and on the 31st December 44,503. The death-rates may, therefore, be calculated with approximate accuracy on the strength with which regiments commenced the year. The total deaths, absent and present, amount to 869, and this number, with a strength of 44,731, represents a loss of 19·43 per 1,000. The deaths of men present with their regiments amounted to 632, giving a ratio of 15·89 in relation to a strength of 39,783, the average present during the year.

NATIVE TROOPS, 1870.

V.

TABLE showing the SICKNESS and MORTALITY among the NATIVE TROOPS serving in the AGRA DISTRICT and in CENTRAL INDIA during the Year 1870, and the prevalence of the principal Diseases in each Month of the Year.

(Several of the Stations of this area usually occupied by Regiments of the Bengal Army, were, in 1870, occupied by Madras Troops. The Statistics of the Madras Troops occupying Stations of the Bengal Presidency are given in Table XVII.)
